

Low Voltage General Purpose Motors

LV Open drip proof motor section

ABB

Making you more competitive

ABB's General purpose motor is designed for use in general industry, meeting the demands of standard applications for OEM's. Motors are readily available from central stock locations and distributors around the world. The motors have high build quality, are available with all the features needed by the OEM market and can be modified to meet most specifications.

ABB is a global leader in power and automation technologies that enable utility and industry customers to improve their performance while lowering environmental impact. The ABB Group of companies operates in around 100 countries and employs about 107,000 people.

General information

Standards

ABB motors are of the totally enclosed and open drip proof, single or three phase squirrel cage type, built to comply with international IEC and EN standards. Motors conforming to other national and international specifications are also available on request.

All production units are certified to ISO 9001 international quality standard as well ISO 14000 environmental standard and confirm to all applicable EU Directives.

Motors for EU motor efficiency levels

A Europe-wide agreement will ensure that the efficiency levels of electric motors manufactured in Europe are clearly displayed. In contrast to the American legislation on motor efficiency the European agreement does not establish mandatory efficiency levels.

It basically establishes three classes giving motor manufacturers an incentive to qualify for a higher class.

ABB is one of only a handful of leading motor manufacturers in Europe to have a motor range to meet or exceed the minimum efficiencies stated in the highest level of the EU agreement of LV motors.

These efficiency levels apply to 2- and 4-pole, three phase squirrel cage induction motors rated for 400V, 50Hz with S1 duty class with the output 1.1 to 90 kW, which

account for the largest volume on the market.

The efficiency of motors from different manufacturers are collated in a database, EURODEEM, published by the European Commission. It is accessible over the Internet at <http://iamest.jrc.it/projects/eem/eurodeem.htm>.

EU efficiency classes for 2-pole motors

Output kW	2-pole Boarderline EFF2/EFF3	EFF1/EFF2
1.1	76.2	82.8
1.5	78.5	84.1
2.2	81.0	85.6

Cooling

Designation system concerning methods of cooling refers to standard IEC 60034-6.

Degrees of protection: IP code/IK code

Classification of degrees of protection provided by enclosures of rotating machines are refers to:

- Standard IEC 60034-5 or EN 60529 for IP code
- Standard EN 50102 for IK code

IP protection:

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water

IK code :

Classification of degrees of protection provided by enclosure for motors against external mechanical impacts.

IK 08

International mechanical protection ———— IK

Characteristic group ———— 08

Relation between IK code and impact energy:

IK cod	IK 0	IK 01	IK 02	IK 03	IK 04	IK 05	IK 06	IK 07	IK 08	IK 09	IK 10
Impact energy Joule	*	0.15	0.2	0.35	0.5	0.7	1	2	5	10	20
									ABB Standard		

* not protected according to EN 50102

Insulation

ABB uses class F insulation systems, which, with temperature rise B, is the most common requirement among industry today.

The use of Class F insulation with Class B temperature rise gives ABB products a 25° C safety margin. This can be used to increase the loading by up to 12 per cent for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation life. For instance, a 10 K temperature reduction will extend the insulation life.

Class F insulation system

- Max ambient temperature 40° C
- Max permissible temperature rise 105 K
- Hotspot temperature margin + 10 K

Class B rise

- Max ambient temperature 40° C
- Max permissible temperature rise 80 K
- Hotspot temperature margin + 10 K

Insulation system temperature class

- Class F 155° C
- Class B 130° C
- Class H 180° C

Safety margins per insulation class

Frequency converter drives

Squirrel cage induction motors offer excellent availability, reliability and efficiency. With a frequency converter – a variable speed drive (VSD) – the motor will deliver even better value. A variable speed drive motor can be started softly with low starting current, and the speed can be controlled and adjusted to suit the application demand without steps over a wide range. Also the use of a frequency converter together with a squirrel cage motor usually leads to remarkable energy and environmental savings.

However, all motors are not suitable for variable speed drive. There are several points that have to be taken into account in the design and selection of the motor, if it is intended for variable speed operation.

Within the General purpose motor range ABB offers motors designed for both Direct On Line (DOL) and variable speed applications.

For more demanding applications the use of ABB Process performance motors is recommended.

When selecting general purpose motors to variable speed drives, following points shall be taken into consideration:

1. Dimensioning

The voltage (or current) fed by the frequency converter is not purely sinusoidal. This may increase the losses, vibration, and noise of the motor. Furthermore, a change in the distribution of the losses may affect to the temperature rise of the motor. In each case, the motor must be correctly sized according to the instructions supplied with the selected frequency converter.

When using ABB converters, please use ABB's DriveSize dimensioning programme or the loadability curves of the corresponding converter type for sizing the motors. The loadability curve for applicable General purpose motors used with ABB's ACS 800- frequency converters with DTC-control can be found in figure 3.

2. Speed range

In a frequency converter drive, the actual operating speed of the motor may deviate considerably from its nominal speed (i.e. the speed stamped on the rating plate).

For higher speeds, ensure that the highest permissible rotational speed of the motor or the critical speed of the entire equipment is not exceeded. When high speed operation exceeds the nominal speed of the motor, the following points should be checked:

- Maximum torque of the motor
- Bearing construction
- Lubrication
- Balancing
- Critical speeds
- Shaft seals
- Ventilation
- Fan noise

Guideline values of maximum speeds for General purpose aluminum motors described in figure 1. Exact values are available on request.

Figure 1. Guideline values of maximum speeds for General purpose motor in aluminum frame:

Motor size	Speed r/min	
	2-pole	4-pole
63-80	6000	4500
90-100	6000	6000
112-200	4500	4500
225-280	3600	3600

At low speed operation the cooling capacity of the fan decreases, which may cause higher temperature rises in the motor. A separate constant speed fan can be used to increase cooling capacity and loadability at low speed. It is also important to check the performance of the grease at low speeds.

3. Lubrication

Variable speed operation affects on the bearing temperature, which must be taken into account when selecting the lubrication method and grease type. For example the life time of sealed bearings can be remarkably shorter than in direct on line operation.

4. Insulation protection

Frequency converter supply causes higher voltage stresses at the windings of the motor than the sinusoidal supply. Thus, the insulation system and possible filters must be selected according to the used voltage and converter type. For selection of insulation system and filters, see figure 2.

5. Bearing currents

Bearing voltages and currents must be avoided in all motors. For reliability issues, insulated bearings and/or properly dimensioned filters at the converter output must be used according to the instructions in figure 2. When ordering, clearly state which alternative will be used.

For more information about bearing currents and voltages, please contact ABB.

6. Cabling, grounding and EMC

The use of a frequency converter puts higher demands on the cabling and grounding of the drive system. The motor must be cabled by using shielded symmetrical cables and cable glands providing 360° bonding (also called EMC-glands). For motors up to 30 kW unsymmetrical cables can be used, but shielded cables are always recommended.

More information about grounding and cabling of a variable speed drive can be found from the manual

“Grounding and cabling of the drive system” (Code: 3AFY 61201998 R0125 REV B) and the ABB’s Low Voltage Motors Manual.

For fulfilling the EMC requirements, special EMC cable(s) must be used in addition to the correct cable gland mounting, with special, extra earthing pieces. Please refer to the manuals of the frequency converter.

Validity of figure 2

Measures mentioned in Figure 2 apply to the applicable motors within the General motors range (not high-output versions) with ACS 800 and ACS 550 drives with uncontrolled DC-voltage. For other alternatives and converter types, please contact ABB.

Figure 2. Selection rules for insulation and filtering in variable speed drives

Motor nominal power P _N or frame size			
	P _N < 100 kW	P _N ≥ 100 kW or IEC 315 ≤ Frame size ≤ IEC 355	P _N ≥ 350 kW or IEC 400
U _N ≤ 500 V	Standard motor	Standard motor + Insulated N-bearing	Standard motor + Insulated N-bearing + Common mode filter
U _N ≤ 600 V	Standard motor + dU/dt-filter (reactor) OR Reinforced insulation	Standard motor + dU/dt-filter (reactor) + Insulated N-bearing OR Reinforced insulation + Insulated N-bearing	Standard motor + Insulated N-bearing + dU/dt-filter (reactor) + Common mode filter OR Reinforced insulation + Insulated N-bearing + Common mode filter
U _N ≤ 690 V	Reinforced insulation + dU/dt-filter (reactor)	Reinforced insulation + dU/dt-filter (reactor) + Insulated N-bearing	Reinforced insulation + Insulated N-bearing + dU/dt-filter (reactor) + Common mode filter

dU/dt filter (reactor)

Series reactor. DU/dt -filter decreases the changing rate of the phase and main voltages and thus reduces voltage stresses in the windings. DU/dt -filters also decrease so-called common mode currents and the risk of bearing currents.

Common mode

Common mode filters reduce so-called common mode currents in VSD applications and thus decrease the risk of bearing currents. Common mode filters do not significantly affect the phase or main voltages on the motor terminals.

Insulated Bearings

Bearings with insulated inner or outer races are used as the standard solution. So-called hybrid bearings, i.e. bearings with non-conductive ceramic balls, can also be used in special applications. More information for spare part selection is available on request.

Mechanical design

Stator

The stator frame is made of profile-pressed sheet steel, giving the motor high mechanical strength, low weight and a good surface finish. The stator core is welded into the stator frame and contributes to its excellent mechanical properties.

Feet and lifting eyes are welded to the stator frame. The terminal box and end shields are of cast iron.

Drain holes

Motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes. The appropriate IM designation, such as IM V3 (IM 3031), is specified, on the basis of the method of motor mounting.

M2FA motors are fitted with drain holes and plugs. The

plugs are open on delivery. Check that the drain holes and grease outlet face downwards, when mounting designation differs from standard horizontal mounting.

In the case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments the drain hole plug should be knocked in.

Terminal box

Terminal boxes are mounted either on the top of the motor, or on either side of the motor, see ordering information page .

In basic version the terminal box can be rotated 2x180° to allow cable entry from either side of the motor.

The terminal box is equipped with cable glands or cable boxes as standard, and terminations are suitable for Cu- and Al-cables. Cables are connected to the terminals by cable lugs which are not included with the motor.

To enable us to supply suitable terminations for the motor please state cable type, quantity and size when ordering.

For dimension drawings of terminal boxes, see drawings.

Co-ordination of terminal boxes and cable entries

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated type and termination parts are supplied according to the table below and on next page.

Deviations from standard design according to the following tables are available on request.

D (FL 33)	100	300	80	292	M10
E (FL 40)	115	370	100	360	M12

Bearings

The motors are normally fitted with single-row deep groove ball bearings as listed in the table on the right. The complete ball bearing designation is stated on the rating plate.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

When there are high axial forces, angular-contact ball bearings should be used. This option is available on request. When a motor with angular-contact ball bearings is ordered, the method of mounting and direction and magnitude of the axial force must be specified. For special bearings, please see variant codes.

Standard bearing types

Motor size	Number of poles	Basic version with deep groove ball bearings		Version with roller bearings, variant code 037 D-end

¹⁾ Viton-seal

Permissible radial forces

The table below gives the permissible radial force in Newtons, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives of 40,000 h.

Motors are B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed. Permissible loads of simultaneous radial and axial forces will be supplied on request.

Permissible radial and axial force for a bearing life of 40,000 hours

			Permissible radial force for:				Permissible axial force for ¹⁾ :		
			Horizontal mounting, sideways direction of force				Horizontal mounting	Vertical mounting with shaf extension downwards	
Motor size	Number of poles	Length of shaft extension E (mm)	Ball bearing at point of application:		Roller bearing at point of application:		Direction of force

¹⁾ Flange-mounted motors with deep groove ball bearings at D-end. Other designs on request. No simultaneous radial forces allowed.

²⁾ On request.

If the radial force is applied between points X₀ and X_{max}, the permissible force F_R can be calculated from the following formula:

$$F_R = F_{xo} - \frac{X}{E} (F_{xo} - F_{x\ max})$$

E = length of shaft extension in basic version

Ordering information

Sample order

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M2FA 315SMA
Pole number	2
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	200 kW
Product code	3GFA312210-ASB
Variant codes if needed	

A	B	C	D,E,F, G	
M2FA	315	SMA	3GFA 312 210 - ADA, 003 etc.	
		1 - 4	5-6 7 8-10 11 12 13 14	

A Motor type
B Motor size
C Product code
D Mounting arrangement code
E Voltage and frequency code
F Generation code
G Variant codes

Explanation of the product code:

Positions 1 to 4

3GFA = Open drip proof squirrel cage three phase motor with steel frame

Positions 5 and 6

IEC-frame size

28 = 280 **35** = 355

31 = 315 **40** = 400

Position 7

Speed (pole pairs)

1 = 2 poles **6** = 8 poles

2 = 4 poles **7** => 12 poles

3 = 6 poles **8** = Two-speed motors

4 = 8 poles **9** = Multi-speed motors

5 = 10 poles

Position 8 to 10

Serial number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted, top-mounted terminal box

L = Foot-mounted, terminal box LHS, seen from D-end

R = Foot-mounted, terminal box RHS, seen from D-end

B = Flange-mounted

L = Foot-mounted, terminal box LHS, seen from D-end

R = Foot-mounted, terminal box RHS, seen from D-end

H = Foot- and flange-mounted, top-mounted terminal box

S = Foot- and flange-mounted, terminal box LHS seen from D-end

T = Foot- and flange-mounted, terminal box RHS seen from D-end

Position 13

Voltage/frequency code

See tables below

Position 14

Generation code

A, B, C...

The product code must, if needed, be followed by variant codes.

Code letters for supplementing the product code for voltage and frequency – single speed motors:

A	B	D	E	F	H
380 VY 50 Hz	380 VΔ 50 Hz	380-420 VΔ 50 Hz 660-690 VY 50 Hz 440-480 VΔ 60 Hz	500 VΔ 50 Hz 575 VΔ 60 Hz	500 VY 50 Hz 575 VY 60 Hz	415 VΔ 50 Hz
S	T	U	X		
220-240 VΔ 50 Hz 380-420 VY 50 Hz 440-480 VY 60 Hz	660 VΔ 50 Hz	690 VΔ 50 Hz	Other rated voltage, connection or frequency, max. 690 V		

Code letters for supplementing the product code for voltage and frequency – two-speed motors:

A	B	D	E	H	S
220 V 50 Hz	380 V 50 Hz	380-400 V 50 Hz 440-480 V 60 Hz	500 V 50 Hz 575 V 60 Hz	400-415 V 50 Hz 460-480 V 60 Hz	220-230 V 50 Hz

The two bullets in the product code indicate choice of mounting arrangement, voltage and frequency (see ordering information page).

Data for other number of poles and bigger frame sizes on request.

General purpose open drip proof motors - Variant codes

Code ¹⁾	Variant	Motor size			
		280	315	355	400
Balancing					
052	Vibration acc. to grade A (IEC 60034-14).	S	S	S	S
417	Vibration acc. to grade B (IEC 60034-14).	P	P	P	P
424	Full key balancing.	P	P	P	P
Bearings and lubrication					
036	Transport lock for bearings.	P	P	P	P
037	Roller bearing at D-end.	P	P	P	P
043	SPM nipples.	P	P	P	P
058	Angular contact bearing at D-end, shaft force away from bearing.	P	P	P	P
107	Pt100 2-wire in bearings.	P	P	P	P
420	Bearing mounted PTC-thermistors.	P	P	P	P
Branch standard designs					
209	Non-standard voltage or frequency (special winding).	P	P	P	P
Coupling					
035	Assembly of customer supplied coupling-half.	P	P	P	P
Heating elements					
450	Heating element, 100-120 V.	P	P	P	P
451	Heating element, 200-240 V.	P	P	P	P
Insulation system					
014	Winding insulation class H.	R	R	R	R
Mounting arrangements					
009	IM 2001 foot/flange mounted, from IM 1001 (B35 from B3).	P	P	P	P
066	Modified for non-standard mounting position (please specify IM xxxx). (must be ordered for all mounting arrangements excluding IM B3 (1001) and B5 (3001)).	P	P	P	P
Painting					
114	Special paint colour, standard grade.	P	P	P	P
Protection					
005	Protective roof, vertical motor, shaft down.	P	P	P	P
072	Radial seal at D-end.	P	P	P	P
Rating & instruction plates					
002	Restamping voltage, frequency and output, continuous duty.	P	P	P	P
095	Restamping output (maintained voltage, frequency), intermittent duty.	P	P	P	P
135	Mounting of additional identification plate, stainless.	P	P	P	P
161	Additional rating plate delivered loose.	P	P	P	P

¹⁾ Certain variant codes cannot be used together.

M = On modification of a stocked motor, or on new manufacture, the number per order may be limited.

R = On request

S = Included as standard

P = New manufacture only

Code ¹⁾	Variant	Motor size			
		280	315	355	400
Shaft & rotor					
069	Two shaft extensions as per basic catalogue.	P	P	P	P
070	One or two special shaft extensions, standard shaft material.	P	P	P	P
Stator winding temperature sensors					
121	Bimetal detectors, break type (NCC), (3 in series), 130°C, in stator winding.	P	P	P	P
122	Bimetal detectors, break type (NCC), (3 in series), 150°C, in stator winding.	P	P	P	P
123	Bimetal detectors, break type (NCC), (3 in series), 170°C, in stator winding.	P	P	P	P
125	Bimetal detectors, break type (NCC), (2x3 in series), 150°C, in stator winding.	P	P	P	P
127	Bimetal detectors, break type (NCC), (3 in series, 130°C & 3 in series, 150°C), in stator winding.	P	P	P	P
435	PTC-thermistors (3 in series), 130°C, in stator winding.	P	P	P	P
436	PTC-thermistors (3 in series), 150°C, in stator winding.	S	S	S	S
437	PTC-thermistors (3 in series), 170°C, in stator winding.	P	P	P	P
439	PTC-thermistors (2x3 in series), 150°C, in stator winding.	P	P	P	P
441	PTC-thermistors (3 in series, 130°C & 3 in series, 150°C), in stator winding.	P	P	P	P
442	PTC-thermistors (3 in series 150°C & 3 in series 170°C), in stator winding.	P	P	P	P
445	Pt100 2-wire in stator winding, 1 per phase.	P	P	P	P
446	Pt100 2-wire in stator winding, 2 per phase.	P	P	P	P
Terminal box					
021	Terminal box LHS, seen from D-end (= L prod.code).	P	P	P	P
180	Terminal box RHS, seen from (reconnection from D).	P	P	P	P
022	Cable entry LHS (seen from D-end).	P	P	P	P
468	Cable entry from D-end.	P	P	P	P
Testing					
145	Type test report from a catalogue motor, 400 V 50 Hz.	P	P	P	P
146	Type test with report for motor from specific delivery batch.	P	P	P	P
147	Type test with report for motor from specific delivery batch, customer witnessed.	P	P	P	P
148	Routine test report.	P	P	P	P
149	Testing according to separate test specification.	R	R	R	R
222	Torque/speed curve, type test and multi-point load test with report for motor from specific delivery batch.	P	P	P	P
153	Reduced test for classification society.	P	P	P	P
760	Vibration level test.	P	P	P	P
761	Vibration spectrum test.	P	P	P	P
762	Noise level test.	P	P	P	P
763	Noise spectrum test.	P	P	P	P

General purpose open drip proof motors in brief, basic design

Motor frame size		280	315	355	400
Stator	Material	Profile-pressed sheet steel			
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822-B05G / RAL 5014			
	Paint thickness	Two-pack epoxy paint, thickness $\geq 70 \mu\text{m}$			
Bearing end shields	Material	Cast iron GG 20/GRS 200			
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822-B05G / RAL 5014			
	Paint thickness	Two-pack epoxy paint, thickness $\geq 70 \mu\text{m}$			
Bearings	D-end 2-pole 4-12 poles	6316/C4 6319/C3	6316/C4 6319/C4	on request 6322/C3	on request 6322/C3
	N-end 2-pole 4-12 poles	6316/C4 6316/C3	6316/C4 6316/C3	on request 6319/C3	on request 6319/C3
Axially-locked bearings	Inner bearing cover	As standard, locked at D-end			
Bearing seal		V-ring as standard, radial seal on request			
Lubrication		Regreasing nipples, M10x1 Grease for bearing temperatures -30°C to $+120^{\circ}\text{C}$			
Rating plate		Stainless steel, with individual serial number			
SPM-nipples		On request			
Terminal box	Frame material	Cast iron GG 15 / GRS 150			
	Cover material	Cast iron GG 15 / GRS 150			
	Cover screw material	Steel 5G, coated with zinc and yellow chromated			
Connections	Cable 2 - 4 pole 6 pole	2 x M63 2 x M63	2 x Ø50/80 2 x Ø60	2 x Ø80 2 x Ø60/80	
	Terminals	6 terminals for connection with cable lugs (not included)			
Fan	Material	Siluminium			
Fan cover	Material	Sheet steel			
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822-B05G / RAL 5014			
	Paint thickness	Two-pack epoxypolyester paint, thickness $\geq 80 \mu\text{m}$			
Stator winding	Material	Copper			
	Insulation	Insulation class F; temperature rise class B unless otherwise stated.			
	Winding protection	PTC-thermistors 150°C , 3 in series, as standard			
Rotor winding	Material	Pressure die-cast aluminium			
Balancing method		Half key balancing as standard			
Key way		Closed key way			
Heating elements	On request	50 W	2x50 W	2x65 W	2x65 W
Drain holes		As standard, open on delivery			
Enclosure		IP 23S			
Cooling method		IC 01			

ABB Motors' total product offer

ABB offers several comprehensive ranges of AC motors and generators. We manufacture synchronous motors for even the most demanding applications, and a full range of low and high voltage induction motors. Our in-depth knowledge of virtually every type of industrial processing ensures we always specify the best solution for your needs.

Low voltage motors and generators

General purpose motor for standard applications

- Aluminum motors
- Steel motors
- Cast iron motors
- Open drip proof motors
- Global motors
- Brake motors
- Single phase motors
- Servomotors

Process performance motors for more demanding applications

- Aluminum motors
- Cast iron motors (IEC and NEMA)
- Motors for high ambient temperatures
- Permanent magnet motors
- High speed motors
- Wind turbine generators
- Smoke venting motors
- Water cooled motors
- Motors for roller table drives

Motors for hazardous areas

- Flameproof motors
- Increased safety motors
- Non-sparking motors
- Dust ignition proof motors

Marine motors

- Aluminum motors
- Steel motors
- Cast iron motors
- Open drip proof motors

High voltage and synchronous motors and generators

- High voltage cast iron motors
- Induction modular motors
- Slip ring motors
- Motors for hazardous areas
- Synchronous motors and generators
- DC motors and generators
