NEMA FRAMES D.C. MOTORS

Some word about SICMEMOTORI

SICMEMOTORI has been designing, manufacturing and selling DC motors since 1962, at first as a Division of SICME (producing wire enamelling plants) and then, from 1967, as an independent company; from the beginning its products have been well received because of their quality and reliability.

SICMEMOTORI products have followed the complete evolution of DC motors technology, and today SICMEMOTORI is one of the leading manufacturers of DC motors in Europe. More than 85% of SICMEMOTORI DC motors are directly or indirectly exported.

The Company is located in Turin, in the north-west part of Italy, in one of the most industrialized area of Europe. The Company is organized on the principles of "lean production" and "learning organization". The integrated IT system of the Company controls all its activities, from order entry to the delivery of materials. Production is managed by a modern "MRP" system, and all operations are controlled by bar code; production is carried out in two plants, with a total surface area of approximately 10,500 sqm. Customers are allowed, via a password, to enter the company's IT system, to check status of their own orders.

Motors are produced according to ISO 9001-2000 quality assurance system.

Due to its long history, SICMEMOTORI has achieved a very high level of experience in the most severe applications, from iron & steel mills to rubber mixers (Banburies), from cranes & hoists to chairlifts & funiculars, to cement factories, mining industries, paper & print machines, sugar centrifuges, plastic extruders and film process, etc..

SICMEMOTORI products can be found all over the world; the after sales service is provided by a network of authorized repair shops, selected and certified by SICMEMOTORI (the updated list is on SICMEMOTORI web site www.sicmemotori.com). SICMEMOTORI is member of EASA.

Introduction

General

NEMA and metric motors are fully laminated (stator, main poles and inter poles, rotor) for use in variable speed drives for industrial applications. Motors have skewed armature slots to ensure low torque ripples at slow speed. Motors are available up to 3200 Hp, and they are available both in non-compensated and compensated versions. In this catalogue, frames 2110-2813 (132-180) are not compensated as standard, frames 3212 and above (200 and above) are compensated as standard. Blower ventilated as standard. Pure shunt winding.

Motor design

<u>Standards:</u>	NEMA Specifications (NE Series) or IEC 60034-1 (P-NP Series, metric frames)
<u>Supply:</u>	from 3-phase fully controlled bridge (no yoke required if armature current form factor is $\leq 1,05$)
<u>Insulation:</u>	Class H (180 °C)
<u>Temp rise:</u>	Class F (145 °C)
<u>Max ambient temp:</u>	40 °C (without derating)
<u>Max altitude of installation:</u>	1000 m.a.s.l. (without derating)
<u>Max skin temperature:</u>	Less than 200 °F (92,4 °C)
<u>Balancing:</u>	ISO 2373, grade "N"
<u>Cooling air:</u>	The motor outputs are based on cooling air flow from non-drive end to drive end.
<u>Terminal box:</u>	Mounting of terminal box on either side of the motor (at left side DE view as standard)

On request

Other voltages
 Other speed ranges
 Compound winding
 Cooling: totally enclosed Air/air – air/water cooling
 Grade "R" or "S" balance
 Terminal box on top
 Brush wear control device available
 All options/accessories available
